DETAILED ACTION

1. Claims 1-10 are presented for examination.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35
U.S.C. 102 that form the basis for the rejections under this section made in this
Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors

Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology

Technical Amendments Act of 2002 do not apply when the reference is a U.S.

patent resulting directly or indirectly from an international application filed before

November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1-5, 10 are rejected under 35 U.S.C. 102(e) as being anticipated by Parker (U.S. Patent No. 6,307,783).

Regarding claim 1, Parker discloses a semiconductor memory device (Figure 1) comprising:

a voltage level detector (120) configured to generate a power-up signal; a ready/busy driver controller (114) configured to generate a busy enable (122) signal in response to the power-up signal; and

a ready/busy driver that is responsive to the busy enable signal (Column 3, lines 25-60).

Regarding claims 2, Parker discloses a command register cooperatively coupled to the ready/busy driver controller (112), and wherein the command register comprises: a program command register configured to provide a program busy signal to the ready/busy driver controller (Column 2, lines 63-67, Column 3, lines 1-32), and an erase command register configured to provide an erase busy signal to the ready/busy driver controller Column 2, lines 63-67, Column 3 lines 1-32), and wherein the program busy signal indicates that the memory device is in a program mode (Column 3, lines 25-32), and wherein the erase busy signal indicates that the memory device is in an erase mode (Column 3, lines 5-8).

Regarding claim 10, Parker discloses a method of accessing a semiconductor memory device comprising determining if an internal voltage has reached an operation voltage level, accessing the semiconductor memory device when the internal voltage has reached an operation voltage level (Column 3, lines 25-42, Figures 6-7).

Allowable Subject Matter

5. Claims 6-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 6-9 include allowable subject matter since the prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. Parker (U.S. Patent No. 6,307,783), and others, does not teach the claimed invention having a ready/busy driver controller having a level shifter configured to generate the busy enable signal in response to the first and second control signal.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thong Q. Le whose telephone number is 571-272-1783. The examiner can normally be reached on 8:00am-5:00pm M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David C. Nelms can be reached on 571-272-1787. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
